- Tailored to your cooling and cabling specifications with multiple standard options
- Can be equipped to handle EMC requirements.
- 360° rolling casters selected for typical flooring environments
- Standard formica counter top can be replaced with a range of other surface types and colors

The delivery of media to audiences is changing rapidly, and so too is the technology behind it, whether it's through radio, television, computer or handheld device. Television and radio stations have converted programming from an analog to a digital delivery system that has an astonishing clear picture and sound quality. The demand for streaming audio and video and the bandwidths this requires is pushing digital equipment technologies to the next levels.

Optima Stantron is proud to be longtime supplier with our racks, consoles, and mobile media carts. The newest addition to our product line is the MMC family of counter-height mobile racks. They are designed to accommodate effortless rolling of electronics across different floor surfaces and sometimes awkward thresholds. The highly modular platform enables infinite design options to accommodate the wide variety of electronics that might be required in a mobile cart, from cable access to cooling issues, to a highly adaptable pivoting arm for monitors or tablets.

When you work with Optima Stantron, the solution always fits your needs.
